

HOW TO MAKE "LEGIT SNOWFLAKES"

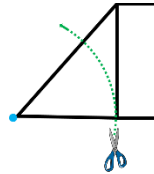

1. Fold the paper into quarters, making sure to be aware of which corner of the paper contains the center of the sheet (blue dot). Put the quartered sheet in front of you, with the center of the sheet at the top left corner.

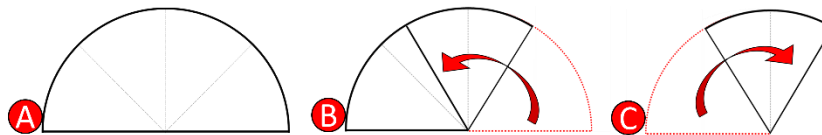

2. Fold down the top right corner until the top edge is in line with the left edge. The center of the sheet needs to be at the point formed by the fold.

3. Holding the point with one hand, make the "pizza cut."

4. Unfold into a semicircle. Then, re-fold it into thirds.

Now you have a "blank." If folded correctly, the angle at the bottom is 60° , $1/6$ of a circle. This is the basic form from which your snowflakes will be cut.
